

## SPIRIT ESP DESANDER

### Advantages

Prevent solids from reducing oil production, and damaging equipment.

In all production, naturally occurring gases and formation sand, salt, scale, corrosion, asphaltenes, and other solid contaminants enter the wellbore and create pumping inefficiencies that severely diminish production and can contribute to increased maintenance costs and unnecessary failures. The patented Spirit ESP Desander is a simple, effective tool that uses cyclonic motion for effective downhole separation.

### Available Sizes

- 3.5" Desander
- 5.5" & 7" Packer assembly with interchangeable cups.

### Applications

The Spirit ESP Desander is designed to effectively separate sands/solids from production and allow the ESP to run at an optimal state.

- Production flows with sand/solids contamination.

### Key Features

- Redress-able
- Ceramic coating
- Extra heavy wall barrel
- Easy to transport, assemble and run
